GREATER STRENGTH

MAGNUM BOOTS: FROM 0 TO 100 IN 35 YEARS

Magnum Boots evolved out of Hi-Tec Sports, the footwear company founded in 1974 by Frank van Wezel. It was Frank's love for sport that led him to build an innovative, lightweight, and instantly comfortable sports shoe.

The first Magnum boot was born in 1982 through a request from the FBI training centre for a strong and lightweight, athletically built, black tactical boot. Once the FBI spread the word, the demand came to supply this product nationwide, as more and more law enforcement and security personnel wanted the comfort and superlight performance our product provided.

With a solid reputation built across the USA, demand from around the world increased. As a result, the Magnum product range expanded to meet the wide range of high-performance needs of professionals working in high pressure environments globally.

Today, the Magnum brand is sold in almost 100 countries around the world. It is the first choice for law enforcement, fire, security, ambulance, hospitality-service, health-service, construction, and industrial professionals.

OUR AIM

Magnum is proud that our consumers are some of the bravest men and women on the planet, protecting us on a daily basis. They rely on our products to perform to the same exacting standards as they do.

Our aim is to continue to protect and serve these heroes by making the highest performing footwear, which always exceeds their demanding expectations, in all of the challenging environments they face.

Through our constant innovation, and belief that good enough is never enough, Magnum footwear will continue to push the boundaries of performance, to exceed the needs of today and of tomorrow.

OUR VALUES

PIONEERING

We must continue to innovate, just as we did with our very first product.

RESPONSIBLE

We keep the very highest standards, because lives depend on it.

UNCOMPROMISING

We never do things by halves. Using proven technologies, we bring globally certified performance products to market.

TRUSTWORTHY

We can always be relied on to exceed the strength, comfort, and protection of our customers.

TECHNOLOGIES

The Vibram® Pentagrip outsole has been developed as an all terrain outsole. The hardness of the compound of this rubber outsole will endure various environments. The outsole compound and design ensures maximum grip and slip-resistance applying to global testing standards. Vibram® is the world leader in high performance rubber soles, combining quality, innovation and the best components for their specific use. Their outsoles are produced with three objectives; to guarantee the best performance, the maximum level of comfort and long lasting quality.

The Michelin name is synonymous with innovation, high performance, durability and value. Pairing MICHELIN outsoles with Magnum boots has led to innovative creations that provide increased comfort, flexibility and support. With its specific anti-slip design for both outdoor and indoor, the MICHELIN outsole is made of special compounds with optimal breaking and grip. Add to this the special arch for better adherence and the wide grooves for water evacuation and enhanced flexibility and you get an outsole that delivers ultimate stability and advanced ground control in the toughest conditions.

RECOIL

RECOIL comfort midsoles provide maximum comfort and shock absorption, by having 69%* more rebound than standard EVA. This ensures ultimate underfoot comfort and cushioning in any kind of activities and on any surface. These durable, long lasting midsoles are synonymous with resilience and cushioning, by absorbing the impact of each step and releasing higher rebound energy to minimize discomfort and injuries. *69% higher rebound compared with regular Magnum EVA compound.

M-D TRACTION

M-D (Multi-Directional) Traction outsoles are all engineered to optimise the self cleaning process. The sawtooth toe sculpting ensures maximum propulsion and additional traction in multiple environments while the additional multi-directional traction deliver detailing on uneven terrain. The M-D Traction outsole is ultra-durable and improves grip and stability.

BOA®

The Boa® System lets you dial in a secure fit for an enduring, all-day comfort that stays consistent and true. You can even make instant micro-adjustments without ever removing your gloves, and easily release pressure. Whether removing your gear or acting quickly in a dangerous situation, Boa makes it easy to get your boots on and off. Say goodbye to untied boots, because Boa's precision engineered laces are contained inside the assembly, out of your way, and out of machinery. And by shedding ice, dirt, and oil, The Boa® System helps reduce contamination. Boa's laces are built to perform in any environment. Guaranteed.

OrthoLite®

OrthoLite® insoles delivers superior cushioning and long lasting comfort. Unlike traditional insoles, the compression set of OrthoLite® insoles is less than 5% over time so the cushioning and fit never change inside the shoe, providing maximum comfort every time you put your shoes on.

Armourgel is a revolutionary new energy absorbing material in footwear. The material stiffens on impact to provide protection but flexes when protection is not required, providing safety and comfort. Through its foam structure, Armourgel reduces 80% of impact forces transmitted to the body, and offers protection at a thickness of just 6 mm. The material can be tuned, washed, and bears freezing and hot temperatures without losing its properties.

KURIM®

To give your boots high abrasion resistance and protection, Kurim molded PU is the material of choice. This seamless looking composite material is lightweight and flexible, giving you increased protection against abrasion without hindering your movements. Kurim is also anti-slip due to its unique composition, which makes it ideal for lightweight, athletic boots.

i-shield

i-shield is Magnum's advanced water repellent technology that provides ultimate footwear protection by shielding boots from water, oil and dirt. This special shield is invisible, lightweight and breathable, whilst repelling water and dirt.

CORDURA® AFT (AIR FLOW TECHNOLOGY) 3D SPACER FABRIC

3D SPACER FABRIC

CORDURA® AFT (Air Flow Technology) 3D Spacer fabric is a highly breathable mesh construction with enhanced abrasion and snagging resistance and an excellent strength to weight ratio, helping ensure your boots are tough and durable.

BENEFITS

- + High breathability
- + High tenacity and abrasion surface
- + Enhanced abrasion and snagging resistance
- + Stylish durability and excellent strength-to-weight ratio

MICHELIN MACH 5 OUTSOLE™

Specific anti-slip tread pattern

Siped sculpture for adhesion on slippery surfaces

Wide grooves positioning for excellent water evacuation and enhanced flexibility

Special arch design for better adherence

Side sculpture for maximum support

Heel brake for optimal braking

MAG-DRY WATERPROOF

Our MAG-DRY membrane lets moisture out without letting water in, keeping feet dry and comfortable all day.

- Waterproof bootie construction to keep your feet dry
- High level of breathability keeping feet comfortable
- Windproof for better protection against the elements
- Abrasion resistance lining for durability regardless the activity

MAG-DRY
WATERPROOF

M²-PACT+

EVA CONTOUR MOULDED SHELL WITH HEEL CRADLE

The moulded cup provides additional underfoot cushioning with the added benefit of the heel cradle wrapping up the sides for support

MOISTURE WICKING TOP LAYER

This low friction, low heat, high abrasion, stretch knit fabric keeps the foot fresh, wicking away any moisture underfoot

LAVA^{XL}

With an invisible layer of LAVA XL, a mineral based odor control technology that provides all day freshness and self-generates for optimal performance

Ortholite[®] IMPRESSIONS

This slow recovery foam is made out of 50% bio-oil content and has a 10-20 second return rate. It compresses to take the shape of the foot overtime to create a customized, comfortable fit

PU INSERTS

For the real pressure points underfoot there are PU inserts providing next level cushioning and comfort

WORLDWIDE STANDARDS

Magnum not only reaches but exceeds many safety specifications and requirements all over the world. We are experts in all areas of product testing to reassure our position as an active leader in the market place. We promise to be a trusted partner in delivering essential equipment.

EUROPEAN FOOTWEAR STANDARDS:

SAFETY FOOTWEAR:

EN ISO 20345 (SB) Toe protection tested with 200 J impact and 15kN compression force

OCCUPATIONAL FOOTWEAR:

EN ISO 20347 (OB) No toe protection against mechanical hazards provided

UPPER:

AN Ankle protection
WRU Water resistant upper leather
WR Water resistant footwear
FO Fuel and Oil-resistant outsole
E Energy absorption of the seat region shall be no less than 20 joules

OUTSOLE CERTIFICATION TERMS

CI Insulation against cold
HI Insulation against heat
HRO Heat resistant outsole compound tested at 300°C

SLIP RESISTANCE:

SRA Slip resistance on ceramic tile floor with NaLS
SRB Slip resistance on steel floor with glycerol
SRC Slip resistance on ceramic tile floor with NaLS and on steel floor with glycerol

PLATE AND TOE

P Penetration resistance outsole penetration force at least 1100 Newton

ANTI-STATIC:

A Electrical resistance between foot and ground of between 0.1 and 1000 Mega Ohms
S1 Footwear made from leather and other materials excluding all-rubber or all polymeric footwear + closed seat region + SB + A + E +FO
S2 S1 + WRU
S3 S2 + P + cleated outsoles

ASTM FOOTWEAR STANDARDS:

ASTM F2413:11 - Standard specification for performance requirements for protective (Safety) toe cap footwear

IMPACT RESISTANT - Must meet requirements of Compression Resistant footwear. Protection against impact energy of 101.7J

COMPRESSION RESISTANT - Must meet requirements of Impact Resistant footwear. Protection against compression force of 11,121N

PUNCTURE RESISTANT - Must meet requirements for Impact and Compression Resistant footwear. Protection against an applied force of 1200N

METATARSAL RESISTANT - Must meet both the requirements for Impact and Compression Resistant footwear. Protection of energy impact of 101.7J

ELECTRICAL HAZARD RESISTANCE (EH) - Protective footwear constructed or manufactured to be capable of withstanding the application of 18,000V (root mean square (rms)) at 60 Hz for 1 min with no current flow or leakage current in excess of 1.0 mA under dry conditions

CSA FOOTWEAR STANDARDS:

IMPACT RESISTANT FOOTWEAR - Protection against impact energy of 125J

PUNCTURE RESISTANT - Protection against an applied force of 1200N (steel pin test)

METATARSAL RESISTANT - Protection against impact using energy of 101.7J (impact velocity 2.99 + 0.06m/s)

ELECTRIC SHOCK RESISTANT - Capable of withstanding the application of 18,000V at 60Hz for 1 minute

SLIP RESISTANCE - Should follow ISO13287 in heel and flat contact modes using the following test surfaces:

Dry quarry tile

Quarry tile wetted with water

Stainless steel wetted with water

AS/NZS FOOTWEAR STANDARDS:

AS/NZS 2210.5:2009 - Occupational protective footwear - Specification for occupational footwear

AS/NZS 2210.3: 2009 - Occupational protective footwear - Specification for safety footwear

AS/NZS 4821: 2014 - Protective footwear for firefighters
